

NORBORD EUROPE

Case Study

CUSTOMER COMMENTS

" From the initial inquiry through to the completion of the job, we received numerous site visits and communication to ensure everything was correct.

On day one of the installation we made some last minute amendments to the layout and design of the project. Any changes were looked over by the project co-ordinator Paul and updated on the drawings for the installation team.

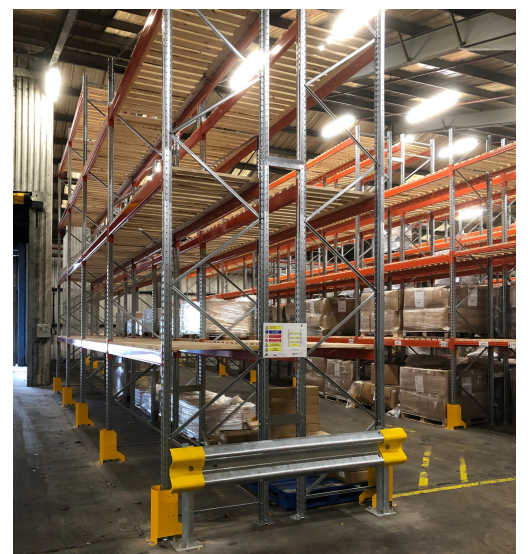

The job was completed ahead of schedule to a high standard. I would definitely recommend BSE UK, in fact I already have to numerous colleges "

PROJECT BRIEF

Salesperson: George Ives
george@bse-uk.co.uk

To strip down existing racking and supply deliver and install New pallet racking in warehouse with timber decking and anti-collapse screens.

PRODUCTS USED

Firstly BSE UK stripped down existing pallet racking and removed from site then New AR Pallet Racking was installed to give the customer 1,272 pallet spaces, all with open boarded timber decking allowing safe and easy storage of pallets. We also installed Anti Collapse Mesh screens to protect walkways and stop products being pushed through and falling from the racking by forklifts. Improving safety within the warehouse for staff and any visitors.
